

What's new in Moodle 2.4?

On Tuesday 23rd of July, the BLE at SOAS is upgrading from Moodle 2.2 to Moodle 2.4, during which time our Moodle site will be available only as **read-only**. The reason for the upgrade is to improve the stability of the system, fix some issues with course backups and to improve performance.

Improved user interface

One of the first changes you might notice is that the **icons** used have been improved, not only for the resources and activities, but also for the editing options.

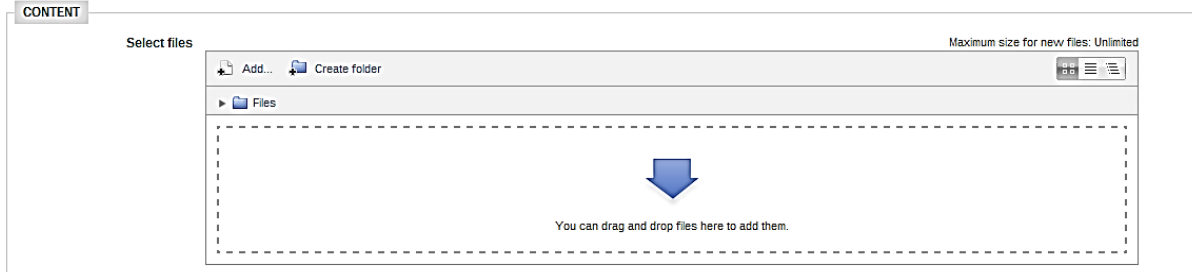

If you have any questions, please contact us at BLE@soas.ac.uk

Drag and Drop Files:

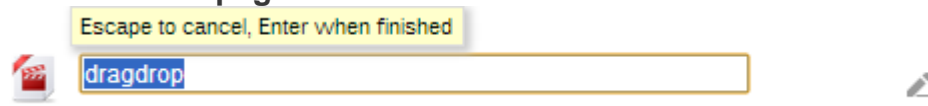

This functionality allows you to pull across files from your desktop straight over to Moodle. This can be done in almost all areas of Moodle but it does not work with Internet Explorer versions below 10. The drag and drop functionality works for uploading single files or for adding files to a folder.

One new icon that will really help to speed editing up for tutors is the **Edit title** icon

This means that you can now **edit the name of any resource or activity directly on the course page.**

File Icons:

Not only are the new icons a little bigger and more colourful but they are designed to be easily accessible in desktop and portable devices, so they improves the usability.
